

Thermal Extractor

TE 2

Specifications

TE 2

Uses

Module for the direct thermal extraction of VOCs and SVOCs from large volume solid or liquid samples. Extracted VOCs are concentrated on an adsorbent tube attached to the TE 2 prior to Thermal Desorption determination. The TE 2 operates completely independent of the analytical system.

Temperature Program for Extraction

- Extraction temperature max. 350 °C
- up to 2 temperature ramps
- Heating rate 1.0 ... 10 °C/min
- Hold time max. 650 min
- Up to ten methods stored in the Controller C200

Cooling Option

 LN₂ⁿ cooling for fast cool down to ambient temperature after extraction

Gas Flow

- split flow and total flow adjustable via needle valves
- factory set to 220 mL/min total flow with 4 bar head pressure (He), based on a Tenax® tube and split flow 20 mL/min
- max. permissible headpressure 4 bar

Sample Tubes

- 180 × 16 × 13 mm (L × OD × ID)
- length of heated area approximately 80 mm

Adsorbent Tubes

- TDS tubes, 178 × 6 mm (L × OD)
- TDU tubes, 60 × 6 mm (L × OD)
- TD 3.5⁺ tubes, 89 x 6.4 mm (L x OD), can be fitted using special ferrules

Dimensions (W \times H \times D)

• 100 × 100 × 250 mm

Weight

• 1.2 kg

Operating Conditions

- 15 ... 35 °C
- relative humidity max. 50-60%, non-condensing
- max. 4615 m above sea level

Storage Conditions

- -20 ... 50 °C
- relative humidity max. 50-60%, non-condensing
- max. 4615 m above sea level

Controller C200

Operating Voltage

• 100 ... 230 VAC, 50 ... 60 Hz

Power Consumption

• 180 watt max.

Dimensions (H \times W \times D)

- 5.5 cm × 17 cm × 27 cm (Controller)
- 4.5 cm × 8 cm × 20 cm (Power supply unit)

Weight

- 1.35 kg (Controller)
- 0.75 kg (Power supply unit)

Accessories

- Aux Flow Pneumatics Module
 Provides micro-processor based control of the gas flow to
 the TE 2. Flows can be set directly on the module, ensuring
 correct and reproducible flow conditions for the Thermal Ex traction process.
- Thermal Extraction Sample holder Sample holder with a defined surface area and emissionbarrier walls and bottom. Enables the determination of emissions from surfaces of materials, such as flooring products, as a function of surface area. The sample holder walls and bottom eliminate emissions from the sample edges and from the back side. This helps ensure that the monitored emissions are proportional to the surface area only and do not originate from the edges of the sample.
