Analysis of Amino Acids Contained in Vegetable Juice

Amino acids contained in vegetable juice were treated with EZ:faast™ (Phenomenex, Inc.), which enables easy pretreatment, and then analyzed with a GC-MS system.

Experiment

Pretreatment

Two kinds of vegetable juice were treated with EZ:faast. Norvaline was added as an internal standard.

Instrument

A GCMS-QP2010 Ultra (with high-power oven) was used for the measurements. The analysis conditions, shown in Table 1, were in conformity with the “Amino Acid Analysis Methods” in the “GC/MS Metabolic Components Database.”

Summary

Pretreatment using the EZ:faast kit, following by analysis using the GCMS-QP2010 Ultra, which is equipped with a high-speed scanning function, enabled rapid analysis of amino acids. With this combination, it took only 15 minutes per sample from pretreatment to analysis.
